Virtual Cancer Genetics Course

13 May – 9 July 2024*

*six half day sessions

This virtual course will teach the core concepts of risk stratification using family history as a tool to enable patients to access appropriate management strategies. The course is designed for all healthcare professionals working in primary care and specialist settings including oncology, breast care, gynae-oncology, gastroenterology and screening services.

Participants will be equipped with the basics of cancer genetic counselling and sessions will include approaches to genetic testing, management of hereditary cancers and consent taking.

If you are looking to start mainstream genetic testing or learn about family history assessment you will benefit from our step by step approach to learning and application to practice.

Please note: The course fee includes access to our Nucleus online module 'Cancer Genomics: The Essentials' and membership of our online SLACK community.

"Excellent course. Good pace and relevant information for clinical practice."
